**Objectives**

Networking within the framework of ELER by collecting, processing, dissemination and sharing of results, experiences, approaches and development know-how between all involved in the development of rural areas and interested carriers/operators, establishing a network of rural space.

- 1. gathering, processing and disseminating findings in rural development
- 2. best practice to a wider circle of actors to make and to support their implementation,
- 3. facilitate the exchange of expertise
- 4. cooperation between different areas and institutions to initiate and accelerate rural development
- 5. cooperation of the national network with EU networks

**Indicators**

**Impact** (measured on the basis of the qualitative results):
- the network forms a stable framework for the implementation of ELER
- new development approaches and project ideas are successful, nationally known
- the transfer of know-how to improve the conditions for the development of regional innovation
- the basis for cooperation (cooperation) of the ELER stakeholders have improved
- the exchange of experience and expertise has improved

**Result**:

1. Output indicators provide quantitative results analysis,
2. specific evaluation questions focus: self-evaluation of the network organizer
3. determining the quality and impact through interviews:
   - ELER program coordinators of the states
   - economic and social partners
   - experts in rural development
   - selected players in rural development

**Output indicators** (quantitative measurement usually on the basis of the number):

1. involvement of relevant groups and institutions in the NLR
2. project analysis
3. events
4. thematic technical working groups
5. advisory support
6. documentation
7. information on trans-national, inter-territorial cooperation
8. know-how transfer
9. initiation of cooperation
10. information support

**Activities**

- financial
- personnel
- material costs
