Healthy and Tasty

Ever since antiquity, the pomegranate has held a special place in perceptions, nutrition and the confrontation of diseases, while it is considered to this day to be the fruit of fertility.

Modern science demonstrates that this ancient folklore was built on solid ground.

Healthy and Tasty

The pomegranate fruit is especially low in calories and particularly rich in carbohydrates and potassium. Years of clinical research have shown that there are many reasons backing the consumption of pomegranate and its juice in particular:

- From antiquity to this day, the pomegranate is considered to be a savory and beneficiary fruit preventing and dealing with many diseases. It is particularly low in calories, while many studies have been devoted to the following beneficiary qualities of pomegranate:
- It improves blood circulation, helps reduced blood pressure and is beneficiary for cardiovascular illnesses. It contains high levels of antioxidants and helps in prostate, breast, skin cancer, etc. It helps in dysentery and osteoarthritis problems and protects the skin.

FRESH POMEGRANATE JUICE:

Preventing many diseases

The pomegranate fruit contains a particularly low amount of calories (68 calories for 100 gr. of fruit) and is particularly rich in carbohydrates and potassium. Years of clinical research have shown that there are many reasons supporting the consumption of pomegranate and its juice in particular:

- The high levels of antioxidants in pomegranate juice, especially of anthocyanins, tannins and polyphenols, has been shown to protect from the formation of arterial atheromatosis and in extension of cardiovascular disease.
- Pomegranate juice has a higher concentration of polyphenols than red wine, green tea or orange juice.
- Pomegranate's polyphenols act well in protecting LDL lipoproteins from oxidation. This is particularly important given that oxidized LDL's contribute to the formation of arterial atheromatosis.

FRESH POMEGRANATE JUICE:

Preventing many diseases

- A pilot research showed that the persons consuming pomegranate juice compared to those who did not manifested a 30% improvement at the size of their atheromatous plaque at the carotid. It also seems that pomegranate acts significantly in reducing high blood pressure, which can result in cardiac incidents.
- Pomegranate juice improves blood circulation in persons with ischemic cardiovascular conditions. Pomegranate juice slows the development of prostate tumour and contributes in repairing the DNA likely to cause the creation of tumours.
