A new EU-funded pilot project [1] is working between December 2017 and April 2019 to map out challenges and opportunities in rural areas, provide a definition of ‘Smart Villages’, and identify good practice examples and case studies on the topic.

In exploring strategies and approaches to a village becoming ‘smart’, the project is looking to collect insights into innovative ways of addressing rural challenges. Contribute with a best practice example [2] by 18 May or propose a village for a case study [1] by 1 June 2018.
