

Renewable Energy Communities in the Clean Energy Package

ENRD

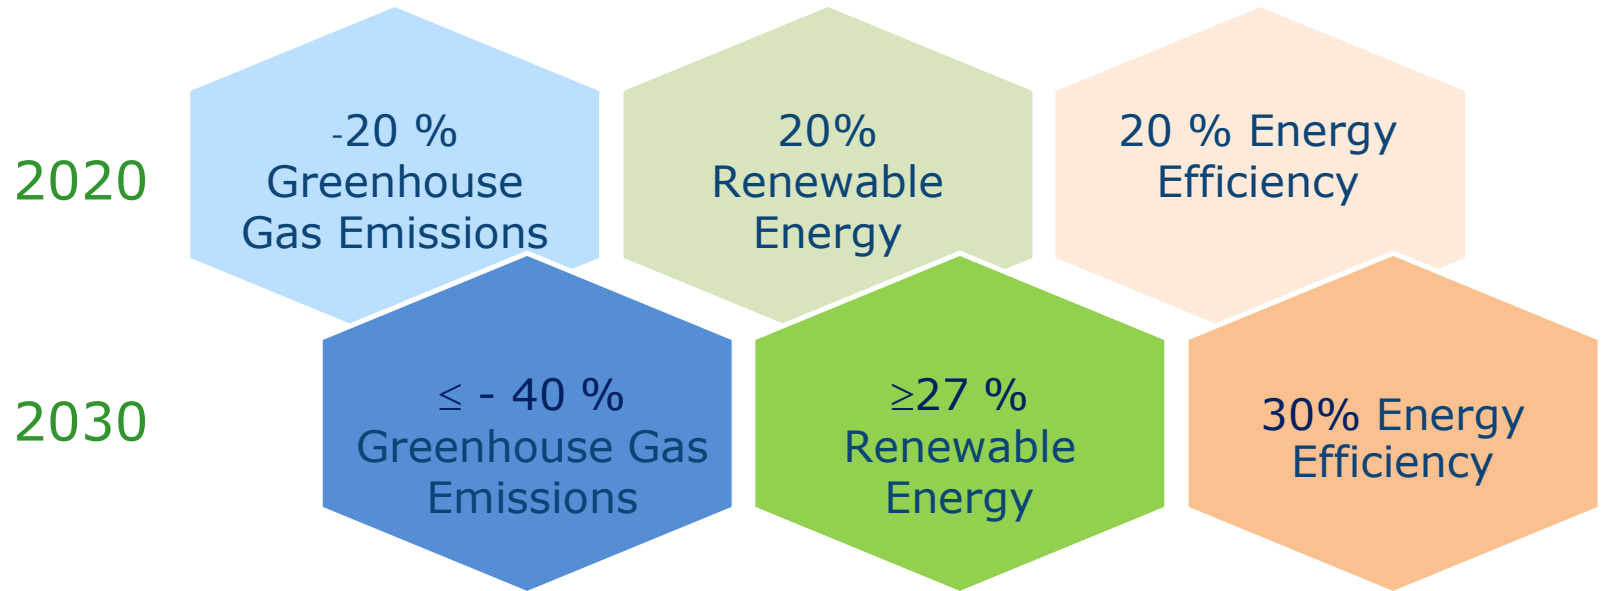

Brussels, 22 May 2018

Jan STEINKOHL

Content

- Objectives of our Energy Policy
- How we want to achieve them
- Why we focus on consumers
- What do we propose for energy communities

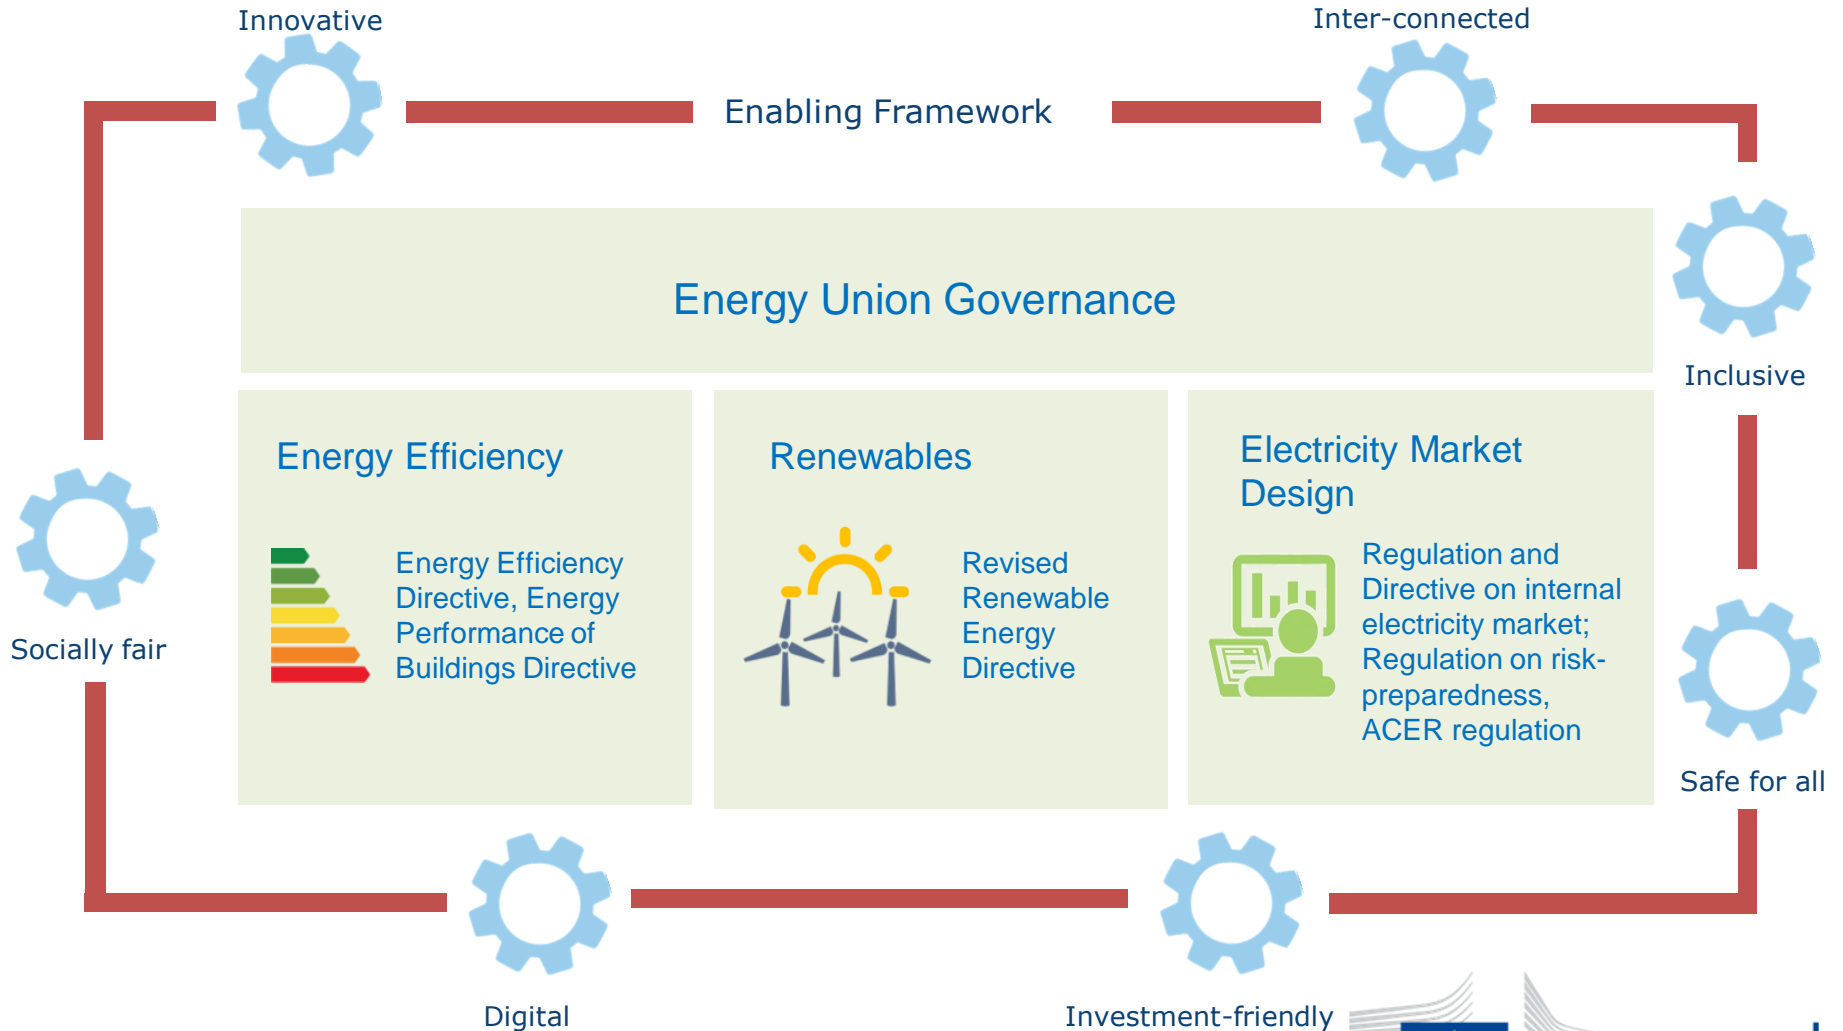

Energy Policy: Our objectives

PARIS2015
UN CLIMATE CHANGE CONFERENCE
COP21·CMP11

2050: Reduction of greenhouse gas emissions 80-95%

The Clean Energy Package

Empowering consumers

- As a regulatory principle to empower consumers
- Mobilising private capital, e.g. self-consumption might drive 50% of rooftop solar deployment
- Increase local acceptance of RES projects

Consumer empowerment

Empowering citizens

- Active consumers, also in multifamily houses, to be allowed to generate, store, sell and consume their own electricity
- Businesses allowed to engage in self-consumption
- Remuneration for electricity fed in to the grid
- Charges to be cost-reflective

Energy Communities

- Recognise energy communities
- Alleviate unnecessary administrative burden,
e.g. for market access
- Enable access to support schemes
- Future-proof
